

Canon EOS 6D Image Sensor Replacement

Replace the image sensor in your EOS 6D.

Written By: Justin Thomas

INTRODUCTION

Use this guide to replace a malfunctioning image sensor in your EOS 6D.

TOOLS:

- [Phillips #00 Screwdriver](#) (1)
 - [Spudger](#) (1)
 - [Tweezers](#) (1)
 - [T6 Torx Screwdriver](#) (1)
-

Step 1 — Rear Body Panel

- Remove the viewfinder cover by pinching the sides and sliding it upward.

Step 2

- Open the battery door on the bottom of the camera.
- Use your thumb to slide the small black tab on the inside of the battery door up and pull the door off the camera.

Step 3

- Slide your fingernail or the flat end of the spudger underneath the rubber covering and gently peel it off all sides of the camera.

Step 4

- Open the covers to the HDMI/AV/MIC ports on the side of the camera by gently pulling outward on the bottom of the covers.
- Rotate the covers to the side so that you can see the connection ports inside.
- Remove the following screws:
 - Two silver 5mm Phillips #00
 - One black 6mm Phillips #00

Step 5

- Remove the cover to the HDMI/AV/MIC ports by gently lifting the tab on the bottom edge of the camera.

Step 6

- Rotate your camera so the bottom side is facing you.
- Remove the following screws:
 - Two 6mm Phillips #00
 - One 3mm Phillips #00

Step 7

- Rotate your camera so the back is facing you.
- Remove the following screws:
 - Three silver 5mm Phillips #00
 - Two black 6mm Phillips #00
 - One black 4mm Phillips #00

Step 8

 A black ribbon wire connects the rear panel to the inside of the camera. Breaking this wire would make your rear screen and buttons non-functional.

- Carefully use your fingers to tilt the back panel downward to about a 90 degree angle.
- Use the flat end of the spudger to gently pry off the ribbon wire from the inside of the camera.

Step 9 — Front and Top Body Panels

- Remove the 8mm Phillips #00 screw from the bottom of the front of the camera.

Step 10

- Rotate the camera so the side opposite the HDMI/AV ports is facing you.
- Remove the 4mm Phillips #00 screw from the bottom edge of this side.

Step 11

- Rotate the camera so the bottom is facing you.
- Remove the following screws:
 - Two 8mm Phillips #00
 - One 4mm Phillips #00

Step 12

- Remove the bottom panel from the camera by using your fingers to pull outward on the tab inside the battery compartment.

Step 13

- Rotate the camera so the front is facing you.
- Remove the following screws:
 - Three 5mm Phillips #00
 - Two 6mm Phillips #00
 - One 4mm Phillips #00

Step 14

- Rotate the camera so the side opposite the HDMI/AV ports is facing you.
- Remove the following screws:
 - One 4mm fine-thread Phillips #00
 - Two 4mm coarse-thread Phillips #00

Step 15

 The red speaker wire is attached to the inside of the front panel. Opening the front panel forcefully may break it.

- Slowly fold the front panel to the right without pulling it away from the right edge of the camera.

Step 16

- Remove the 4mm Phillips #00 screw on the inside of the front panel to separate the panel from the speaker wire.

Step 17

- Remove the 4mm Phillips #00 screw from the inside of the top panel, below the strap hook.

Step 18

- Remove the 4mm Phillips #00 screw from the inside of the top panel, below the shutter button.

Step 19

- Rotate the camera so the top is facing you.
- Remove the 6mm Phillips #00 screw from next to the analog screen.

Step 20

- Rotate the camera so the back is facing you.
- Remove the Phillips #00 screw from the viewfinder focus.

Step 21

- Carefully detach the two light brown ribbon wires on the top panel:
 - The right ribbon by prying it out with the flat end of the spudger.
 - The left ribbon by using tweezers to gently wiggle it out toward the top.

Step 22

- ⚠ A ribbon wire connects the inside of the top panel to the body of the camera.
- Slowly lift the top panel to about an inch above the body of the camera.
- Carefully use the flat end of the spudger to detach the ribbon wire from the top of the camera.

Step 23

- Grip the remaining side panel with your fingers and gently pop it off the camera.

Step 24 — Image Sensor

- Carefully peel the black tape off from across the back of the camera.

Step 25

- Use the pointed end of the spudger to lift up on the silver latches on four ribbon wires.

Step 26

- Use the pointed end of the spudger to carefully slide out the four light brown ribbon wires.

Step 27

- Use the flat end of the spudger to lift up on the large, light brown ribbon wire in the middle of the camera.

Step 28

- Remove two 4mm screws from the metal plate on the back of the camera.

Step 29

- Use the pointed end of the spudger to carefully remove the metal plate.

Step 30

- Remove six 4mm Phillips #00 screws from the back of the camera.

Step 31

- Slide the flat end of the spudger under the top of the large blue panel and carefully pry it off.

Step 32

- Remove three 6mm Torx T6 screws from the back of the camera.

Step 33

- Use tweezers to remove the small metal plate and the thin strip of black tape underneath it.

Step 34

- Remove two Phillips #00 screws from the back of the camera.

Step 35

- Use your fingers to grip the top of the image sensor and pull it slightly outward.
- Lift the sensor out toward the top of the camera.

To reassemble your device, follow these instructions in reverse order.
